

NUB Series Cylindrical Roller Bearings

NSK has developed the NUB series of cylindrical roller bearings in order to meet the requirements of steel making equipment and continuous-casting machines. The optimised design can reduce the total cost of ownership for continuous casting machine guide rolls.

Product Features

- High capacity through optimized design
- Reduced internal differential sliding friction
- Allows for simultaneous shaft thermal expansion and bending
- Non-separable design

Benefits

- Three times longer life time
- Improved machine productivity and reliability
- Reduced maintenance costs

Condition Description

- Compact Environment
- Contamination
- High Load
- High Temperature

Industries

- Steel and Metals

120	NUB	40	V	C4
-----	-----	----	---	----

Description

120	Bore Diameter
NUB	Bearing Type
40	ISO Dimension Series
V	Full Complement
C4	Radial Internal Clearance
